

Up to 240 bar - 38 lpm

**Operation**

This is a solenoid operated 2 way normally open poppet valve. When de-energised flow goes from 1 to 2; energised, flow is blocked by a load holding poppet.

This valve is typically used as a solenoid operated dump valve. If flow is required in both directions in the de-energised position, valve S2D can be used.

**Manual override options available.**
